

Upload 360 Views To eBay

Please note that these instructions for eBay are for an older version of eBay. eBay may no longer support active HTML-5 and therefore interactive 360s may no longer work on eBay.

1. First, you need to have a website where you can host the 360 Views. You can also host them on our server at: <https://stream.iconasys.com>
2. Next, after the file is hosted, instructions are as follows:
we have created a unique embed code wrapper for our 360 output that you can insert into the product description area using the following code:

```
<span><object width="600" height="370" type="text/html" allowscriptaccess="always" allowfullscreen="true" data="http://iconasys.com/Downloads/goldring-50mm/index.html">
</object></span>
```

- In the **blue** area: Insert either the `iframe.html` link or the `index.html` link of the 360 file hosted on your servers

- In the **green** area: You can define the size at which the 360 view will display.

3. a quick workflow video for embedding 360 product views into an ebay listing. Video is here:
<https://youtu.be/Sgm8FcxI8Pc>
4. We found this article:
<https://www.thebalance.com/promote-your-items-with-ebay-videos-1140577>
so it sounds like users can embed videos from Youtube. So basically our 360 still image sequence. You can create mp4 output, upload to Youtube then embed the Youtube link into eBay.
